

300 Series HEADLINER EVAPORATORS

The 300 Series are extremely popular because of their size, performance and ease of maintenance. Designed for small to medium-sized cab applications, the 300 Series units are so effective because they cool the operator's head and upper torso. Models range from our most compact headliner, the 305, to the largest of the 300 Series, the 310, which includes one of our highest capacity coils.
